Building LDAP-Enabled Applications With Microsoft's Active Directory And Novell's NDS

Synopsis

Building LDAP-Enabled Applications with Microsoft's Active Directory and Novell Directory Service shows how to build LDAP-savvy applications in Active Directory and NDS. LDAP is an open, vendor-neutral standard for accessing directory information. The book uses real-world code examples to demonstrate how to access LDAP-enabled applications using Java servlets, Java applets, and Active Server Pages, and covers security issues.

Book Information

Paperback: 208 pages

Publisher: Prentice Hall; 1st edition (December 26, 2001)

Language: English

ISBN-10: 0130621455

ISBN-13: 978-0130621450

Product Dimensions: 9.3 x 6.9 x 0.6 inches

Shipping Weight: 14.1 ounces

Average Customer Review: 4.0 out of 5 starsÂ Â See all reviewsÂ (1 customer review)

Customer Reviews

We have been using Active Directory (Windows 2000/2003 LDAP server) since 1999. Over the past week I have been evaluating the roll LDAP and Active Directory could play in consolidating contact information for 150 client locations. I needed a quick overview of LDAP. I already had this book on the shelf and found it to be exactly what I needed. The book is a serious one. You should have prior experience with TCP/IP fundamnetals, administration of Active Directory or NDS, and database connection progamming. Code examples (simple things) are in Java, but the concepts will be clear to those who work in any language. I particularly enjoyed the chapter on the limitations of LDAP.
